

IN THE SPECIFICATION

Please amend the specification as follows:

Page 4, paragraph 1:

The sole fig. shows an detailed embodiment of a receiver 1 according to the present invention.

____ Such a receiver 1 is capable of receiving modulated signals. Examples thereof are narrow-band receivers for receiving Frequency Shift Keying (FSK), such as 4-FSK signals, FM modulated signals or the like. Paging, the relatively new standard named 'bluetooth', remote meter reading, security (car theft) are some of the application areas. Apart from possible bandpass filters (not shown), the so called front-end of the receiver 1 is provided with an antenna 2, a low noise amplifier 3, whose gain is controllable through an Automatic Gain Control (AGC) signal, a band pass filter 4, and a local oscillator 5 -which in the embodiment as shown is the first local oscillator providing a first local oscillator signal LO1- and having an IF filter 6.
